## The Experimental Status of Three-Body Charmless B-Decays

Mathew Graham SLAC

Paris 3-Body Workshop
February 1, 2006

## Introduction

- Goal: provide a snapshot of our experimental knowledge of charmless 3-body decays
- 4 different levels of measurement:
- "unmeasured" $\rightarrow$ self-explanatory
- "inclusive" $\rightarrow$ all resonance structure is disregarded; just measure the total rate to the 3-body final state
- "Q2B" $\rightarrow$ 3-body final state is measured in a 2-body way...e.g. $\mathrm{B}^{0} \rightarrow{ }^{\prime} \rho^{+} \pi^{-"} \rightarrow \pi^{+} \pi^{-} \pi^{0}$
- interference effects are ignored to first order
- "Dalitz" $\rightarrow$ full amplitude fit has been performed
- Color code numbers...Inclusive vs. Q2B vs. Dalitz
- I'll show both final and preliminary results...I'll try to keep with preliminary numbers in bold-italics

## $\mathrm{B} \rightarrow \pi \pi \pi$ Decays

 -related to CKM angle $\alpha$Color Allowed

Color Suppressed
 -involve either $\mathrm{ab} \rightarrow \mathrm{u}$ or $\mathrm{b} \rightarrow \mathrm{d}$ transition

## 3 diagrams dominate...

-color allowed tree
-color suppressed tree
-b $\rightarrow$ d penguin

February 1, 2006

## $B^{+} \rightarrow \pi^{+} \pi^{-} \pi^{+}$Dalitz Analysis QBABAR

The $3 \pi$ Dalitz plot isn't very busy... mainly just the $\rho$

- Red $\rightarrow$ qqbar
- Green $\rightarrow$ bbbar
-Blue $\rightarrow$ Signal Model
-Points $\rightarrow$ Data

## $\mathrm{B}^{+} \rightarrow \pi^{+} \pi^{-} \pi^{+}$Results

| Mode | BaBar <br> $\mathrm{BR}\left(10^{-6}\right)$ <br> $\mathrm{A}_{\mathrm{CP}}$ | Belle$B R\left(10^{-6}\right)$ <br> $A_{C P}$ |
| :---: | :---: | :---: |
| Inclusive | $\begin{gathered} 16.2 \pm 1.2 \pm 0.9 \\ -0.01 \pm 0.08 \pm 0.03 \end{gathered}$ | ---- |
| $\rho^{0}(770) \pi^{+}$ | $\begin{aligned} 8.8 & \pm 1.0 \pm 0.8 \\ -0.07 & \pm 0.12 \pm 0.05 \end{aligned}$ | $8.0 \pm 2.2 \pm 0.7$ |

| NR* | <4.6 | ------------ |

BaBar: $210 \mathrm{fb}^{-1}$ Belle : $29.4 \mathrm{fb}^{-1}$

BaBar: PRD 72, 052002, 2005.
Belle : PLB 542, 183, 2002.

## $B^{0} \rightarrow \pi^{+} \pi^{-} \pi^{0}$ (Q2B) Results

$$
\begin{aligned}
& f_{\text {Quag }}^{\rho^{+\pi \pi^{-}}}(\Delta t)=\left(1+A_{C P}\right) \frac{e^{-\mid \Delta \Delta t / \tau}}{4 \tau}\left[1+Q_{\text {ug }}(S+\Delta S) \sin (\Delta m \Delta t)-Q_{\text {lug }}(C+\Delta C) \cos (\Delta m \Delta t)\right] \\
& f_{\text {Quag }}^{\rho^{-\pi \pi^{+}}}(\Delta t)=\left(1+A_{C P}\right) \frac{e^{-\Delta \Delta t / \tau}}{4 \tau}\left[1+Q_{\text {ug }}(S-\Delta S) \sin (\Delta m \Delta t)-Q_{\text {aug }}(C-\Delta C) \cos (\Delta m \Delta t)\right]
\end{aligned}
$$

-Dominated by B $\rightarrow \rho \pi$, not a CP state
-3 additional parameters
-Babar results from a TD Dalitz analysis

- more info later

BaBar: $193 \mathrm{fb}^{-1}$ (except BRs..90fb-1)
Belle : $140 \mathrm{fb}^{-1}$ (except BRs.. 78 or $350 \mathrm{fb}^{-1}$ )

| Observ. | BaBar | Belle |
| :---: | :---: | :---: |
| $\mathrm{BR}\left(\rho^{+} \pi^{-}\right)$ | $22.6 \pm 1.8 \pm 2.2$ | $29.1 \pm 5.0 \pm \mathbf{4 . 0}$ |

| $\mathrm{BR}\left(\rho^{0} \pi^{0}\right)$ | $<2.9$ | $3.1 \pm \mathbf{0 . 9 \pm 0 . 7}$ |

BaBar: PRL 91, 201802, 2003, hep-ex/0409099, PRL 93, 051802, 2004. Belle : hep-ex/0307077, PRL 94, 121802, 2005, hep-ex/0508077.

## Direct CPV in $\mathrm{B}^{0} \rightarrow \pi^{+} \pi^{-} \pi^{0}$ ?

## Preliminary

Combined BaBar and Belle

Some indication of direct CP! In more intuitive parameters:

$$
\begin{aligned}
A_{\rho \pi}^{+-} & \equiv \frac{A_{\rho \pi}+C+A_{\rho \pi} \Delta C}{1+\Delta C+A_{\rho \pi} C} \\
& =-0.15 \pm 0.09 \\
A_{\rho \pi}^{-+} & \equiv \frac{A_{\rho \pi}-C-A_{\rho \pi} \Delta C}{1-C-A_{\rho \pi} \Delta C} \\
& =-0.47_{-0.15}^{+0.13}
\end{aligned}
$$

## Other $B \rightarrow \pi \pi \pi$ Results

-Adding more $\pi^{0}$ s is hard...

- $\rho^{+}(770) \pi^{0}$ was measured in a Q2B way
- no $\pi^{0} \pi^{0} \pi^{0}$ modes (nor inclusive) have been measured
-could include $\mathrm{f}_{0} \pi^{0}$, " $\sigma$ " $\pi^{0}$, etc... -is a "Gershon-Hazumi" mode...definite CP eigenstate -Very diffcult to measure experimentally

| Mode | BaBar$\mathrm{BR}\left(10^{-6}\right)$ <br> $A_{C P}$ | Belle$\mathrm{BR}\left(10^{-6}\right)$ <br> $A_{C P}$ |  |
| :---: | :---: | :---: | :---: |

## $\mathrm{B}^{+} \rightarrow \mathrm{K}^{+} \pi^{-} \pi^{+}$Dalitz Analysis

BABAR
BaBar: $210 \mathrm{fb}^{-1}$

## $\mathrm{B}^{+} \rightarrow \mathrm{K}^{+} \pi^{-} \pi^{+}$Dalitz Analysis

## Preliminary

$\mathrm{f}_{\mathrm{x}}$ looks like a broad scalar at $\sim 1450 \mathrm{MeV}$

## $\mathrm{B}^{+} \rightarrow \mathrm{K}^{+} \pi^{-} \pi^{+}$Comparisons

- Difficult to do direct comparison between Belle and BaBar because they use different signal models
- Main differences are in K(1430) and non-resonance models
- BaBar: LASS for the 1430, flat NR
- Belle : Relativistic BW for the 1430 , sum of exponentials for NR

## $\mathrm{B}^{+} \rightarrow \mathrm{K}^{+} \pi^{-} \pi^{+}$Results

| $\mathrm{K}_{\mathrm{L}} \pi \pi$ | No Measurements |  |  |  |
| K- $\pi^{+} \pi^{+}$ |  | <1.8 |  | <4.5 |
| $\mathrm{K}-\pi^{+} \pi^{+}$ | Unmeasured (and highly suppressed) |  |  |  |
| $\mathrm{K}-\pi^{0} \pi^{0}$ |  |  |  |  |

Babar: hep-ex/050817

## $B \rightarrow K K \pi$ Results

Modes with two Kaons (even number of s-quarks) are suppressed. No 3-body modes have been observed yet.

| Mode | BaBar$\mathrm{BR}\left(10^{-6}\right)$ <br> $\mathrm{A}_{\mathrm{CP}}$ | $\begin{array}{cc} \hline \text { Belle } & \begin{array}{c} \mathrm{BR}\left(10^{-6}\right) \\ \mathrm{A}_{\mathrm{CP}} \end{array} \\ \hline \end{array}$ |
| :---: | :---: | :---: |
| K $\mathrm{K}^{-} \mathrm{J}^{+}$ | <6.3 | <13 |
| $\phi \pi^{+}$ | <0.41 | ----------- |
| $\mathrm{K}^{*} \mathrm{~K}^{+}$ | <5.3 (CLEO) |  |
| $\mathrm{K}+\mathrm{K}^{0} \pi^{-}$ | -------- | <18 |
| $\mathrm{K}+\mathrm{K}-\pi^{0}$ | <19 (CLEO) |  |
| $\phi \pi^{0}$ | <1.0 | ---------- |
| $\mathrm{K}_{\mathrm{s}} \mathrm{K}_{\mathrm{s}} \pi^{+}$ | ---------- | <3.2 |
| $\mathrm{K}+\mathrm{K}^{0} \pi^{0}$ | <24 (CLEO) |  |
| $\mathrm{K}+\mathrm{K}^{+} \pi^{-}$ | <1.3 | <2.4 |

## $B \rightarrow K K K$ Decays

These decays include $\phi K_{s}, K^{+} K^{-}-\mathrm{K}_{\mathrm{s}}$, and $\mathrm{K}_{\mathrm{s}} \mathrm{K}_{\mathrm{s}} \mathrm{K}_{\mathrm{s}} \ldots$ (almost) exclusively $b \rightarrow s$ penguin decays!
$\ldots \mathrm{K}^{+} \mathrm{K}^{-}-\mathrm{K}_{\mathrm{s}}$ does have this tree conribution

## $\mathrm{B}^{+} \rightarrow \mathrm{K}^{+} \mathrm{K}^{-} \mathrm{K}^{+}$Dalitz Analysis

The fx state looks like a scalar...
M~1500MeV, $\Gamma \sim 140 \mathrm{MeV}$

February 1, 2006
Mathew Graham

## $B+\rightarrow K+K-K+$ BAGMGB

| Mode | BaBar$\mathrm{BR}\left(10^{-6}\right)$ <br> $\mathrm{A}_{\mathrm{CP}}$ | Belle$\mathrm{BR}\left(10^{-6}\right)$ <br> $\mathrm{A}_{\mathrm{CP}}$ |
| :---: | :---: | :---: |
| Inclusive | $29.6 \pm 2.1 \pm 1.6$ <br> $0.02 \pm 0.07 \pm 0.03$ | $30.6 \pm 1.2 \pm 2.3$ |
| $\phi \mathrm{~K}^{+}$ | $10.0 \pm 0.9 \pm 0.5$ <br> $0.05 \pm 0.06 \pm 0.01$ | $9.6 \pm 0.9 \pm 0.9$ <br> $0.01 \pm 0.12 \pm 0.05$ |
| $\mathrm{NR}^{*}$ | ----------- | $24 \pm 1.5 \pm 3.5$ |

BaBar: 82, and $210 \mathrm{fb}^{-1}$ Belle : $140 \mathrm{fb}^{-1}$

BaBar: PRL 91, 051801, 2003. hep-ex/0408072.
Belle : PRL 91, 201801, 2003. PRD 71, 092003, 2005.

## $\mathrm{B}^{0} \rightarrow \mathrm{~K}^{+} \mathrm{K}^{-} \mathrm{K}_{\mathrm{s}}$ Dalitz Analysis

In the model: $\phi, \mathrm{f}_{\mathrm{x}}(1500)^{* * *}, \chi_{0}, \mathrm{f}_{0}(980)$

Two solutions...switch of NR-f $\mathrm{f}_{\mathrm{x}}$ Non-Resonant--exp( $\beta \mathrm{M}_{\mathrm{K}+\mathrm{K}_{-}}$)

No P-wave (other than $\phi$ )

phase. Large difference in $f_{x}$ amplitude depending on solution
${ }^{* * *} \mathrm{M}\left(\mathrm{f}_{\mathrm{x}}\right) \sim 1500 \mathrm{MeV}$; $\Gamma\left(\mathrm{f}_{\mathrm{x}}\right) \sim 100 \mathrm{MeV}$; it's a scalar
Probably the same as what is seen in $\mathrm{K}^{+} \mathrm{K}-\mathrm{K}^{+}$

## $B \rightarrow K K K^{0}$ Branching Fraction Results

| Mode | BaBar | Belle |

Belle : hep-ex/0507037

## Baryonic B-decays

Study of charmless baryonic decays has lagged behind the meson decays...they are quite a bit more complicated theoretically.
A few things we know:

- preference to many body final states... $\bar{p}<p \bar{p} \pi<? p \bar{p} \pi \pi$ -enhancement at low $p \bar{p}$ mass is observed in all modes -similarly seen in $\mathrm{p} \bar{\Lambda}$

## Baryonic Results

| Mode | BaBar | Belle |
| :---: | :---: | :---: |
| $\mathrm{pp} \pi^{+}$ | ------------- | $3.1 \pm 0.7 \pm 0.4$ |
| $\mathrm{pp} \pi^{0}$ | -------------- | ------ |
| ppK ${ }^{+}$ | $6.7 \pm 0.5 \pm 0.4$ | $5.3 \pm 0.4 \pm 0.6$ |
| ppK ${ }^{0}$ | ----------- | $1.2 \pm 0.3 \pm 0.1$ |
| ppK** | -- | $10.3 \pm 3.0 \pm 1.5$ |
| ppK*0 | ------------ | <7.6 |
| pA ${ }^{-}$ | ----------- | $3.3 \pm 0.6 \pm 0.4$ |
| pAK ${ }^{-}$ | ------- | <0.82 |
| $\mathrm{p} \Sigma^{0} \pi^{-}$ | ----------- | <3.8 |
| $\Lambda \Delta \pi^{+}$ | ---------- | <2.8 |
| $\Lambda \Delta \mathrm{K}^{+}$ | ---------- | $2.9 \pm 0.8 \pm 0.4$ |

# Babar: $210 \mathrm{fb}^{-1}$ Belle: varies 

These BFs are roughly 5-10 times smaller than the mesonic decays

BaBar has some work to do...

Babar: PRD 72, 051101, 2005.
Belle: PRL 64, 131801, 2004. PLB 617, 141, 2005. PRL 90 201812, 2003.
February 1, 2006
Mathew Graham

## The pp Enhancement: a Resonance?

 pay no attention to the closed circles ;)

BES has associated a resonance decaying to $\pi \pi \eta$ ' with this enhancement... $\mathrm{M}=1834 \mathrm{MeV}$ $\Gamma=69 \mathrm{MeV}$

The pp spectrum from $\mathrm{ppK}^{+}$and pp form factor look quite similar...not great agreement with the resonance though

## 

Lots of numbers... most make sense

## Status of sin2 $\beta_{\text {eff }}$

# The 3-body groups supply most of these very important measurements 

## ...still a hint of deviation from the SM?

## Summary

- There's a lot of variety of physics involved with 3body charmless decays
- CKM angles... $\alpha$ (and $\gamma$ )
- New Physics search through s-penguins
- Spectroscopy
- Come a long way, but still work to do
- We'd like to do away with the Q2B analysis
- A Dalitz analysis is the right tool and it should be used...we have the technology, even for TD-CP!
- With more data:
- Dalitz analysis will become feasible for more modes
- some of the current measurements can become "precision" measurements
- we should start to see some of the very rare decays
- the baryonic decays may start to become more interesting
