On December 11, during the Collaboration Meeting at SLAC National Laboratory, the BABAR experiment will celebrate its 25th anniversary. This dedicated event will give the opportunity to recall the discoveries by the B factories of CP violation in the decays of the b quark and many new phenomena. More than 10 years after the end of data taking, BABAR keeps publishing papers (576 to this day) and to show new results in conferences.

All are invited to participate to the celebration (indico site: <https://indico.cern.ch/event/765572/>) where will be reviewed the history of the Collaboration, the main discoveries and technical breakthroughs as well as progress in the fields studied by BABAR being made in current experiments and anticipated in new projects.
